

Step-by-Step Instructions

1. **Run the appropriate SQL commands** for each table to remove duplicates and handle NULL values.
2. **Verify that the data has been cleaned** by running `SELECT COUNT(*)` or similar queries to ensure no duplicates and NULLs remain.
3. **Export the cleaned data** to CSV using the MySQL Workbench export feature.
4. **Import the cleaned CSV files** into Excel for further analysis and visualization.
